Explanation of Results

This battery quick check report is designed to quickly verify the condition of your battery. The information this quick check provides is based on your vehicle's battery condition as it was when it arrived at our dealership

- State Of Charge (SOC):** How much charge is currently in the battery. 100% is fully charged.
- State Of Health (SOH):**The general condition of the battery and how well it can deliver its factory rated performance.

Good battery: This battery health check has determined that your battery meets or exceeds factory minimum specifications

Additional Diagnosis Required: Diagnostic mode is required for complete results and t]he battery may require a charge in order to get a proper diagnosis. Another reason for additional diagnosis required may be the cable clamp connections to the battery. The clamp connections should be as secure to the battery posts as possible

Replace battery: This battery quick check has determined that your battery cannot meet factory specifications and should be replaced. This decision is based on the Battery SOH which considers various factors such as sulfation , age, charge condition, voltage recovery etc, the criteria is measured against a new healthy battery specification.
